# COMPANY PROFILE

PAM **PAM** originates from the pipeline business of the Saint Gobain, which is one of the world's top 500 companies. Founded in 1856, PAM is a world renowned brand of ductile iron pipes, dedicated to providing a complete and adapted high quality solutions for water supply and drainage network systems.

PAM's **PAM** ductile iron water supply and drainage pipes and fittings, valves, stainless steel pipes and fittings can be applied in:

- >> **Municipal water supply and sewage pipe network construction:** covering rain and sewage diversion, recycled water pipelines, integrated pipe galleries, subway supporting pipelines and other application scenarios;
- >> **Water conservancy pipe network construction:** covering long distance water diversion pipelines such as water sources, reservoirs, rivers and hydraulic hubs, as well as small hydropower, agricultural water conversion, farmland irrigation and other pipelines;
- >> **Special pipeline laying:** such as trenchless pipeline laying (HDD, and jacking pipe), anchor joint, etc.;
- >> **Industrial parks and enterprises supporting water supply and sewage pipeline laying;**
- >> **Building water supply and sewage pipelines;**
- >> **Other applications: heating pipes, EAHE Elixair pipes, etc.**

With proprietary technology, quality products, and a high level of service to our customers, PAM **PAM** enjoys a high reputation in the field of ductile iron pipe systems.

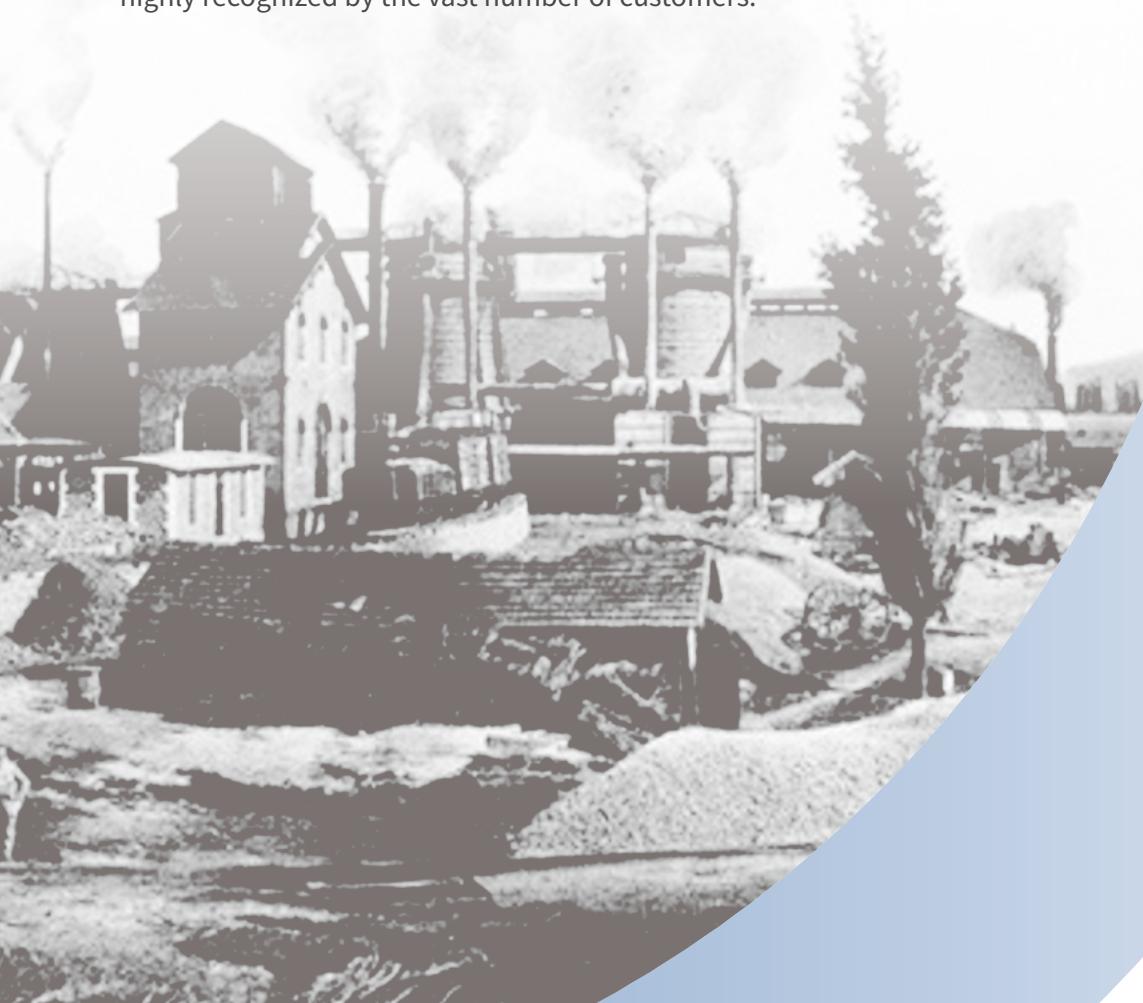

**100** >> With business covering 100 capitals and 10,000 cities

**50000** >> 50,000 project cases

**160** >> Over 160 years of experience in production and application of cast pipes

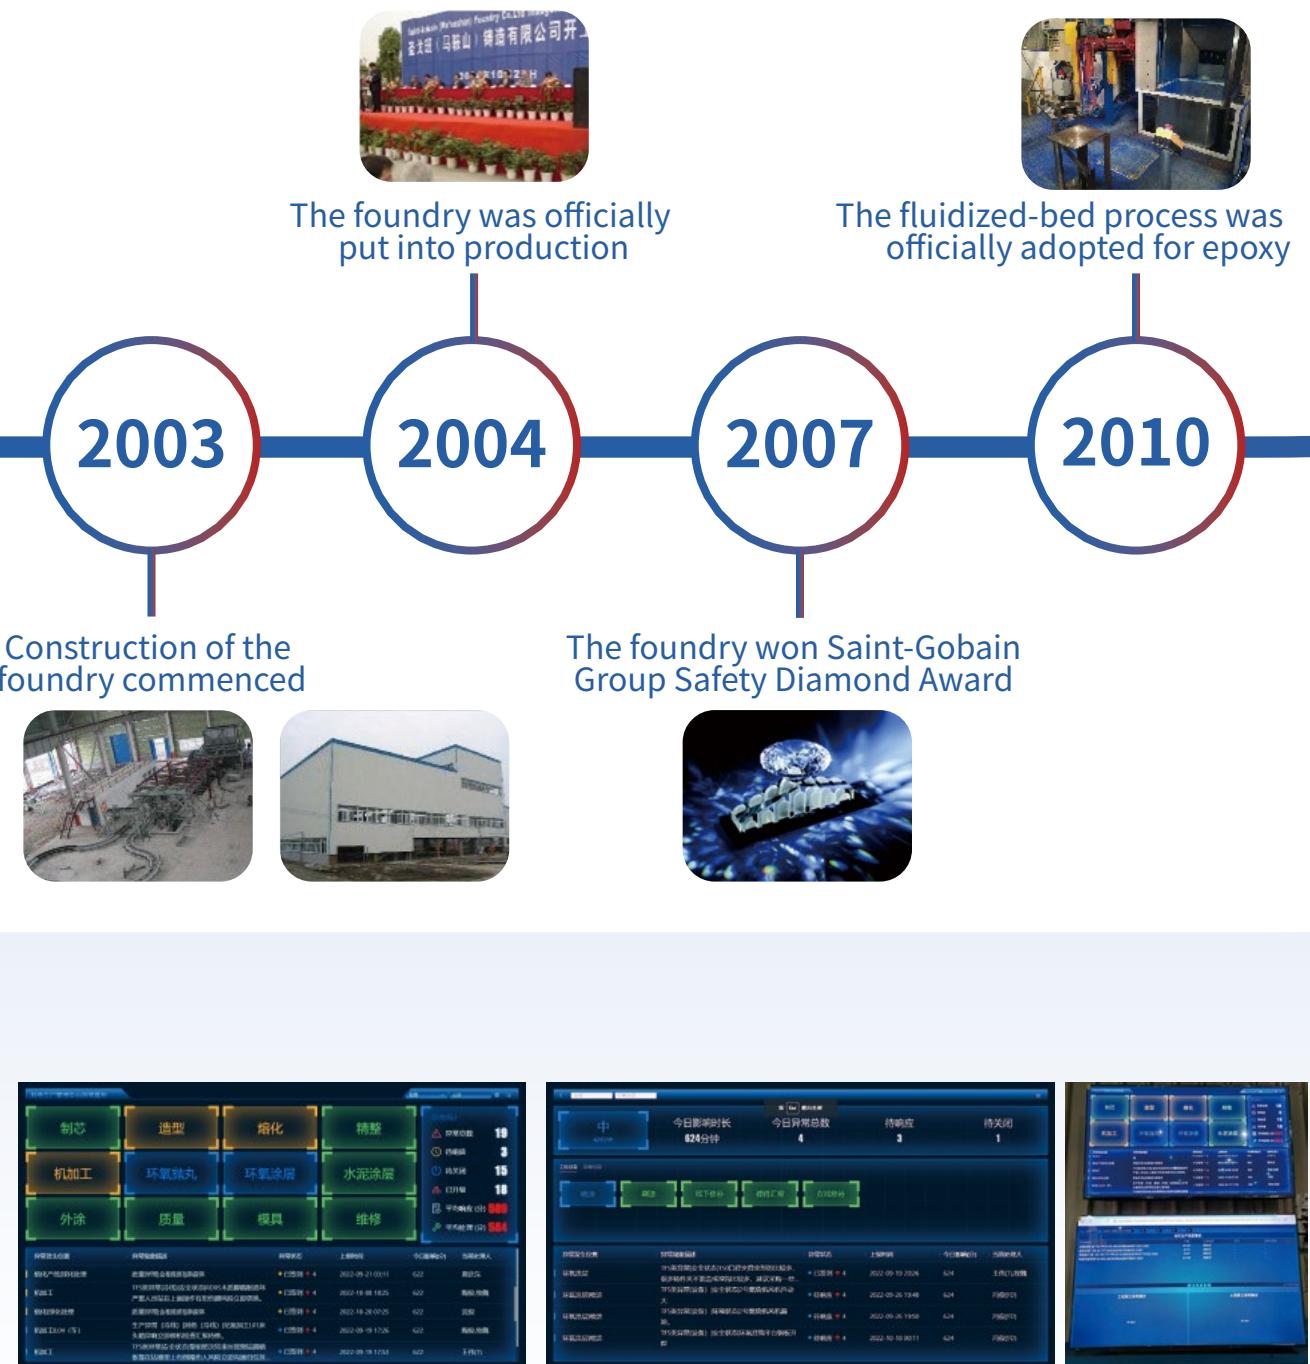

**1500** >> Over 1,500 patents

In 1997 PAM **PAM** appointed experienced management teams and technical specialists from France to take charge of the construction, operation and technical guidance of the plant in China. The process requirements and quality standards of Chinese plants are consistent with those of European plants. Thanks to PAM's more than 160 years of experience in cast pipe production, PAM China has a more advanced ductile iron pipe production line in the world, and its high quality products and services are highly recognized by the vast number of customers.

# EVENTS AND ADVANTAGES

Fittings account for a small proportion of investment in an entire pipeline network or system, but they play a pivotal role. According to the wooden barrel theory, the improper selection of fittings may easily endanger the safe operation of the entire pipeline. Bearing the concept of "Quality First" in mind, Saint-Gobain PAM is committed to providing high-quality ductile iron fittings (DN80-DN2200) to ensure the safety of pipeline networks.

## WORLD-CLASS MANUFACTURING

For better development and in order to offer first-class products and services, Saint-Gobain PAM strives to achieve a win-win result in operational excellence and customer satisfaction by using WCM (world-class manufacturing) management methods.

Saint-Gobain PAM China's foundry has pioneered the WCM journey within the Company since 2009. Through the total employee involvement in the WCM program, a management system and approach focused on reducing waste, increasing efficiency and improving quality and safety, Saint-Gobain PAM China has automatically and intelligently achieved energy consumption reduction, and improvement of production efficiency and product quality, in order to achieve excellent operation and customer satisfaction.

The automatic grinding process for foundries was realized

2018

2021

2022

The Z8 Cold-box core making automatic production line was put into use

A new fluidized-bed production line was built

## INTELLIGENT MANUFACTURING

**Saint-Gobain PAM China carried out the production and operation information technology project in the foundry**

### RESULTS

- A digital production and operation management system has been built to achieve transparent control of the entire production process through real-time, on-site data entry;
- Combined with the Company's WCM program into consideration, foundation has been preliminarily established for a manufacturing operation management system, and efficient on-site management tools have been put into effect through exception-driven and mission-driven management models, providing greater value for managers;
- A prevention mechanism in quality control and a product traceability system have been established to reduce quality costs and risks by setting up quality control plans and defining processes, and to have the ability to trace key materials, quality, and processes in case of any quality problems;
- Intelligent decision support and continuous improvement have been achieved through efficient hierarchical meetings and by using big data analytics, and accurate and real-time inventory data are ensured, and the efficient collaboration between planning, manufacturing and finished goods yard has been realized.

# PRODUCTION PROCESS

## Molten iron smelting:

- Comprehensive inspection of all raw materials;
- Monitor the chemical composition of molten iron for each batch;
- Measure the temperature of molten iron for each batch immediately before the molten iron runs out of the furnace;
- All monitoring data are interconnected and shared online.

## Spheroidization:

- Monitor the chemical composition of each spheroidized molten iron ladle;
- Measure the temperature of each molten iron ladle before casting.
- Adopt tundish-cover spheroidizing.

## Moulding:

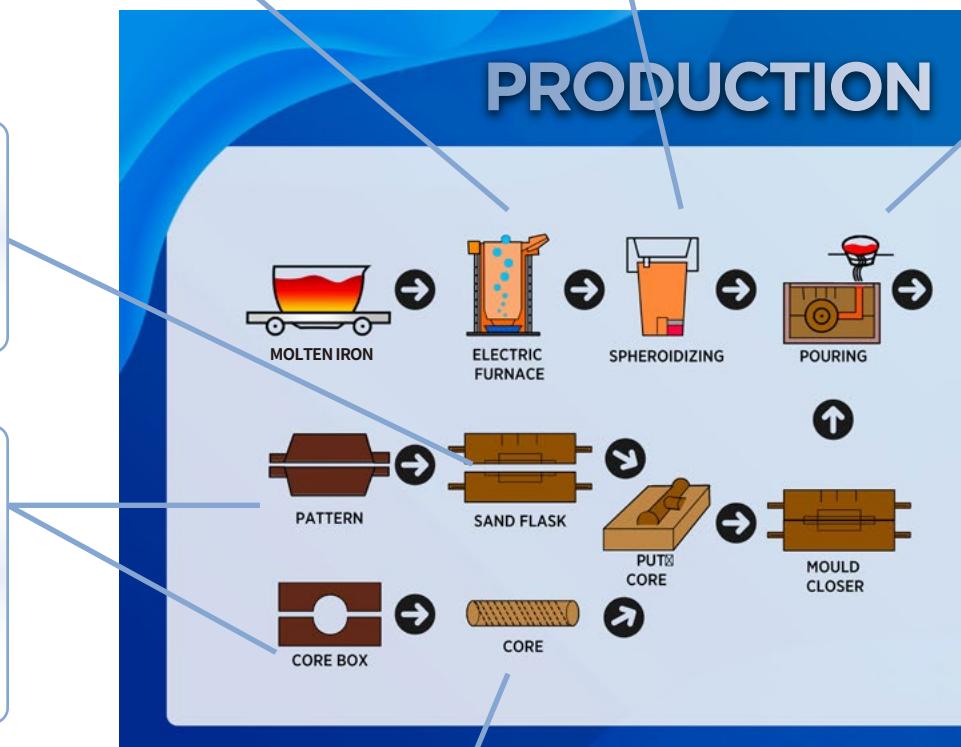

- Static-pressure horizontal molding
- Monitor sand preparation performance

## Pattern and core box preparation:

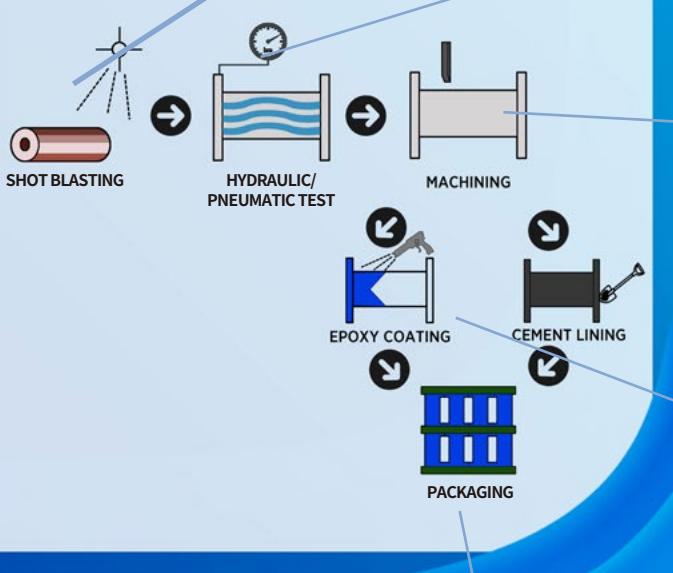

- Select full-metal patterns;
- The patterns can be quickly changed to realize one die for multiple varieties

## Core Making:

- Triethylamine cold-box resin catalysis
- Monitor core strength

# PROCESS

## Pouring:

- Adopt automatic stream inoculation
- Monitor metallographic structure and mechanical properties

## Shot blasting for finishing:

- Suspension frame for shot blasting
- High-strength steel shot blasting
- Automatic polishing robot

## Hydraulic/pneumatic test:

- 100% inspection
- The only water-tank-type pneumatic test machine in China

## Machining:

- Special CNC machines

## Epoxy/cement:

- PAM provides both cement lining and epoxy coating for anti-corrosion protection. For high corrosive conditions, we recommend choosing epoxy coating.
- High-strength steel sand + steel shot blasting
- Monitor surface dustiness, degree of rusting, roughness, etc
- Automatic monitoring of heating temperatures
- Automatic spraying and fluidized-bed production processes
- Monitor epoxy coating thickness and performance

## Finished goods yard:

- Customized packaging solutions

# PRODUCT INTRODUCTION

## Product standards for ductile iron fittings

COUNTRY/MARKET	SYSTEM/PRODUCT	HEALTH	COATING
China	Standard for Water Supply GB/T 13295 Standard for Sewage Supply GB/T 26081	Issued by the Provincial Center for Disease Control and Prevention	Epoxy coating GB/T 34202
Europe	Standard for Water Supply ISO2531/EN545 Standard for Sewage Supply ISO7186/EN598	WRAS	EN14901
Italy	Accredia		
Oceania	AS/NZS2280		

## Anti-corrosion protection

### O) PAM PROVIDES SEVERAL OPTIONS FOR INTERNAL LINING AND EXTERNAL COATING

>> Internal lining

- Epoxy lining (average thickness  $\geq 250 \mu\text{m}$ )
- Cement mortar lining

>> External coating

- Epoxy coating (average thickness  $\geq 250 \mu\text{m}$ )
- Zinc rich paint + finishing layer (for zinc rich paint, average density  $\geq 150 \text{g/m}^2$ , for finishing layer, average thickness  $\geq 70 \mu\text{m}$ )

**For highly corrosive conditions, PAM recommends fittings with both epoxy lining and coating for a better anti-corrosion protection.**

### O) ADVANTAGES OF EPOXY COATING

>> PAM fittings' epoxy coating complies with the EN14901 standard.

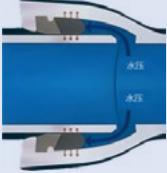

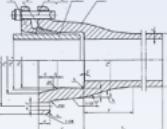

>> PAM utilizes electrostatic spray technology to apply the epoxy coating.

>> Before the coating process, the fittings undergo a high-intensity steel shot blasting to ensure the coating's effectiveness. The blasted fittings become as smooth as new, meeting the Sa 2.5 level specified in ISO8501-1.

>> PAM carries out a lot of tests to ensure that the epoxy coating meets the EN14901 standard:

- Adhesion strength test: This test checks the epoxy layer's adhesion strength, which must be no less than 8 MPa.
- Epoxy thickness measurement: Using an electromagnetic thickness gauge, the average thickness of the epoxy coating should be no less than 250  $\mu\text{m}$ , with a minimum thickness of 200  $\mu\text{m}$ .
- Holiday testing: This detects any missed spots in the epoxy coating.
- Impact test: Evaluates the epoxy coating's impact resistance.
- MIBK test: Assesses the cross-linking properties of the epoxy coating.
- Cathodic disbondment test and water bath aging test (70°C for 7 days): These tests verify the epoxy coating's adhesion strength.

# Types of joints for ductile iron fittings

Types of joints for ductile iron fittings	Graphics	Accessories	Description
Tyton joint		Tyton joint gasket	A conventional joint for water and sewage fittings. It is a push-in flexible joint, which is assembled by pushing the spigot through the gasket into the socket of the mating component. At the same time, the joint provides significant angular deflection, which can adapt to land subsidence.
Standard joint		Standard joint gasket	A conventional joint for water and sewage pipe fittings. Compared to the Tyton joint, it has better leaktightness and greater angular deflection, and can be installed faster during construction.
K joint		Gland, rubber gasket, bolt, nut	The joint is sealed by gland and gasket. It's easy for repair and maintenance.
Restrained joint		Standard joint gasket, locking ring	It is used to prevent joint separation for pipes and fittings. It can prevent disconnection in the pipeline caused due to the thrust generated by the water pressure within the pipeline, and reduce the use of concrete anchor blocks at bends, tees, blank flanges, and tapers, etc.
Flange joint		Rubber gasket, bolt, nut	It is used to connect other components with flange joints, such as valves. Place a rubber gasket that serves as a seal between two flanges and fasten them together with bolts and nuts to complete the connection.

# QUALITY SERVICE

## CUSTOMIZED PACKAGING PLAN

PAM provides customized packaging solutions for fittings to ensure that fittings would not be damaged during transportation.

Packaging method	Pallet packaging			Crates
	The surface of fittings is not protected	Fittings are wrapped in bubble film	Joints for fittings are wrapped with bubble film	
Relevant packaging materials involved	Pallets, dividers, stretch wrap film	Pallets, dividers, bubble film, stretch wrap film	Pallets, dividers, bubble film, anti-UV stretch wrap film	Crates, bubble film
Packaging Benefits	1. The fittings will not collide after packaging	1. The fittings will not collide after packaging 2. The dust will not enter the fittings 3. After wrapping with bubble film, avoid surface quality problems caused by slight collision of fittings	1. The fittings will not collide after packaging 2. The dust will not enter the package 3. Using anti-UV stretch wrap film can prevent ultraviolet rays from fading the fittings after exposure to sunlight	1. Bubble film reduce and buffer the collision of fittings in the crate 2. The dust will not enter the fittings
	Pallets, dividers, stretch wrap film   	Pallets, dividers, bubble film, stretch wrap film   	Pallets, dividers, bubble film, anti-UV stretch wrap film   	Crates, bubble film   

Note: Real packaging plan depends on real project and situation.
